PROFESSIONAL SUMMARY

Security-focused CS student (Cyber Security specialisation) with hands-on Python tooling for OWASP Top 10 detection and real-time network threat analysis. Built and validated attack-detection logic against live simulations (ARP spoofing, SYN scans, DNS tunnelling) in isolated lab environments. Pursuing eJPT. Seeking a SOC / Network Security role to apply lab-validated detection skills in production.

TECHNICAL SKILLS

- **SOC & Detection:** Log analysis, alert triage, ARP spoofing / port-scan / DNS tunnelling detection, anomalous traffic analysis
- **Pen Testing:** OWASP Top 10, SQLi, XSS, CSRF, open redirects, parameter fuzzing, CVSS-style severity scoring
- **Tools:** Burp Suite, Nmap, Wireshark, Scapy, Metasploit (basics), Gobuster, Nikto, Kali Linux
- **Protocols:** TCP/IP, HTTP/HTTPS, DNS, ARP, packet analysis
- **Languages:** Python, Bash, JavaScript, C/C++, Java
- **Labs & Platforms:** TryHackMe (SOC L1), HackTheBox, PortSwigger Academy, DVWA, OWASP Juice Shop, VirtualBox

PROJECTS

Web Application Vulnerability Scanner

Jan 2026

Python · Requests · BeautifulSoup · GitHub

- Detected 6 OWASP Top 10 vulnerability classes (SQLi, XSS, CSRF, insecure headers, open redirects) in a single automated scan — coverage matching 4–6 separate manual tools; validated against DVWA and OWASP Juice Shop with 0 false negatives on known high-severity injection points.
- Built CVSS-style severity engine auto-classifying findings into Critical / High / Medium / Low, eliminating 100% of manual ranking from the triage workflow.

Network Threat Detection & Traffic Analyzer

Feb 2026

Python · Scapy · Wireshark · GitHub

- Engineered real-time packet capture detecting ARP spoofing, port scanning, and DNS tunnelling with <2s alert latency; flagged 100% of simulated arpspoof and Nmap SYN scan events in VirtualBox lab (Kali + Metasploitable 2).
- Decoded TCP/IP, HTTP, and DNS layers to surface unencrypted credential transmissions; structured output as per-session summaries mapped directly to SOC Tier 1 triage workflow.

Stark Network – MCU-Inspired 5-Agent AI System

Apr 2026 – Present

Python, PyQt6, Groq, Gemini API, FastMCP/SSE, LiveKit, Whisper, ChromaDB, SQLite · GitHub

- Built a production 5-agent network: **J.A.R.V.I.S.** (master orchestrator – PyQt6 HUD, Whisper STT, Groq LLaMA-3.3-70b intent routing), **F.R.I.D.A.Y.** (news/weather/markets, LiveKit), **V.E.R.O.N.I.C.A.** (Gmail/Outlook/Slack/Telegram, OAuth 2.0), **E.D.I.T.H.** (OSINT – WHOIS/DNS/Shodan/Firecrawl + ChromaDB), **U.L.T.R.O.N.** (port scan, log monitor, shell exec, Playwright); supports multi-agent query chaining.

EXPERIENCE

Executive — BitBucks FinTech Club, SRM IST Delhi-NCR

Jan 2026 – Present

Social Media Core Member — GeeksforGeeks Campus Body, SRM IST Delhi-NCR

Sep 2025 – Present

Photography Lead — ISTE Student Chapter, SRM IST Delhi-NCR

Oct 2025 – Jan 2026

EDUCATION

B.Tech – Computer Science Engineering (Cyber Security Specialisation)

2024 – 2028

SRM Institute of Science and Technology, Delhi NCR

CERTIFICATIONS & TRAINING

- **eJPT** – eLearnSecurity Junior Penetration Tester (*In Progress, 2026*)
- **PortSwigger Web Security Academy** – Completed: SQLi, XSS, CSRF, Authentication, Access Control
- **TryHackMe / HackTheBox** – SOC Level 1 path (TryHackMe); active practitioner
- **Cybersecurity Fundamentals** – Infosys Springboard, 2025
